RE: **Backflow Device Test**
Service Address:

Dear Customer:

Protecting the quality and safety of our water supply is something we take very seriously. Part of that role is checking that water from other sources does not accidentally contaminate the water you and your neighbors rely on. Our records show that you have the following device installed at the above referenced service address for just that reason.

Type:	Double Check Valve Backflow Prevention Assembly
Model:	007
Serial No.:	
Size:	1.00
Location:	domestic

In accordance with The Pennsylvania Safe Drinking Water Act, this device must be tested on a routine basis to ensure that it is working properly. If the device does not pass, you must repair or replace the device and then have the device re-tested.

A qualified Backflow Device Tester must perform the test. It is necessary to stop the flow of water through the device in order to test it. This means that the shutoff valves on each side of the device must be in good working order and also that performing the test will result in water service being interrupted (unless you have two devices in parallel). Please plan your test accordingly.

Please have the enclosed test form completed by the qualified tester and return it by via fax 570-830-6512 or regular mail to the above address.

If you have recently submitted your completed test form, thank you and please disregard this notice.

Thank you for helping us protect the safety of the water that serves your community. Please call us at 570-830-6549 if you have any questions.

Sincerely,

Cross Connection Department
